

Trust the  
**proven solution**  
for return on investment

# Trust in the proven solution used to plan millions of meals every year

Momentum's Dietary Management System enables your food service department to streamline production, meal service and clerical work. Designed and supported by experienced nutrition professionals, the system will improve resident care, meal satisfaction and survey results, while enabling you to reduce costs.

**NUTRITIONAL CARE PLANS** represent a powerful enhancement to resident nutritional management.

- Maintain all diet order, dislike and preference information in this electronic version of a 'Cardex'.
- Assign meal specific dining areas and generate easy-to-read tray cards and seating plan reports. You can generate nourishment lists and labels to simplify preparation.
- Track weights and schedule assessments to accurately manage nutritional risk.
- Fully integrated with our clinical and billing ADT systems to track resident admissions, discharges, and transfers.

**MENUS** extend the value of Nutritional Care Plans with an integrated menu component.

- Create unlimited cycle menus and holiday menus.
- Accommodate both selective and non-selective menus.
- Print attractive week at a glance, therapeutic spread sheets and selective menus.
- Reduce tray errors with menu-specific tray tickets to ensure residents receive appropriate menu selections in accordance with therapeutic diet restrictions, dislikes and preference information.

The screenshot shows a software window titled "Nutritional Care Plan" for resident ADAHEL01, Mrs. Helen D Adams, Room EAST 102 B. It displays meal textures (Breakfast, Lunch, Supper) all set to "Regular". Under "Special Diets / Allergies", "High Fiber" is selected. The "Dining Area" is "Main DR 1 - 1" and "Special Utensils" include "Lip Plate" and "Weighted Utensil". There are checkboxes for "Custom Meal Choices", "Meals/Snacks on HOLD", and "Print Selective Menu". A "Selective Menu" dropdown is set to "High Fiber".

Create customized nutritional care plans for each of your residents.

**PRODUCTION** integrates resident and menu information to create resident-driven production reports.

- Enter your favorite recipes and/or use those packaged with the software.
- Print easy-to-read, multi-yield recipes.
- Create production sheet templates that generate tallies, pan labels and precisely-sized recipes for your production needs, reducing food waste and ultimately saving money.

**COSTING** will extend the capabilities of the Menus and Production modules with real-time control of menu and recipe costs. The Costing module provides the flexibility to cost recipes and menus in a variety of formats.

- Cost each resident's meal choices, cost a menu, and produce a suggested order list based on user defined "grocery list" templates.
- Use the suggest order feature to simplify the ordering process.
- Calculate extended costs and totals following a physical inventory, resulting in significant time savings.

**ASSESSMENT** completes the Dietary Management System by providing you with quick access to nutritional analysis and assessment capabilities.

- Create goals and monitor the progress of each resident toward those goals.
- Ensure compliance with dietary guidelines and improve survey results through concise menu nutritional analysis reports.

**THE PLATINUM VERSION** of the Dietary Management System handles multi-facility chains and individual facilities. If you require centralized management, use the Platinum version to develop and control menus, recipes, inventory items and nutritional analysis at the corporate and regional offices.

- Save time by efficiently distributing menus and recipes electronically to other facilities.
- Anticipate cost-sensitive issues at the corporate level, while providing facilities with flexibility at the local level.

# Ohio Home Chain Cuts Costs 10%

Ohio Presbyterian Retirement Services (OPRS), based in Columbus, operates 11 nursing homes. In its first year utilizing Momentum Dietary Management, meal costs dropped from \$5.28 to \$4.74.\*

John Andrews, Corporate Director of Dining Services, states that the two program components that have contributed to the greatest results (together with standardized recipes) are the inventory control and overall food production management modules. "For example, at one point we may have been using eight different types of bacon," Andrews recalls. "That number has been cut to two: one pre-cooked and one raw."

On average, Momentum customers report a food-cost savings of 5-10 cents per patient per day. Combined with time savings, increased controls over quality of care and increased resident satisfaction – that's powerful return on investment.

*\*As reported in Food Service Director Magazine, September 15, 2001 issue.*

## BENEFITS

### *Better Service to Residents*

Develop personalized menus and seating plans, easily track personal preferences, and offer more menu options.

### *Decrease Costs*

Automated control of meals and recipes means less waste. You also have the ability to take advantage of seasonal price fluctuations.

### *Save Time*

Spend less time on labor-intensive processes such as handwriting tray cards and labels, and valuating inventory.

### *Fewer Errors*

With built-in edit checks, there is no need to transcribe handwriting. The strong integration among modules also means continuity of information.

### *Better Survey Compliance*

The system includes easy-to-generate log reports and includes HACCP-compliant standardized recipes.

---

*"It has allowed us to get control of operations by giving us trackable information. It has also enabled us to utilize today's standard of a 'Balanced Carb Diet' by eliminating the guesswork."*

*— Don Coffey,  
Baptist Homes*

*"This software has allowed us to save in excess of 40 hours per week!"*

*— Wanda Rawson,  
Cortland Memorial Hospital*

Momentum Healthware

# Dietary Management

*Momentum Healthware Dietary Management is trusted by many to streamline production and meal service, as well as improve quality of care, meal satisfaction, survey documentation, and reduce costs.*

*The Dietary Management solution integrates with other Momentum applications to serve the continuum of long-term care – from independent living, to assisted living, to nursing homes, to regional hospitals.*

The Momentum Healthware solution has been developed and refined over a decade of serving healthcare customers. Our solution is comprised of four product categories; Dietary Management, Clinical Systems, Business Systems, and Decision Support Systems.

Momentum Healthware

## Clinical Systems

The most comprehensive Electronic Health Record on the market gives you the ability to track patient care from one facility or across a CCRC.

Momentum Healthware

## Business Systems

The world's leading financial solution, Microsoft Dynamics, serves as the foundation for powerful billing, reporting, and reimbursement capabilities.

Momentum Healthware

## Decision Support Systems

Make decisions on fact, not feel. Our innovative reporting system and executive dashboards deliver valuable information when you need it.
