Turning Challenges into Opportunities

It is quite evident the long-term care industry has entered a period of unprecedented change. A sizeable generation of Baby Boomers is aging and brings a new and formidable set of expectations and requirements for their care in the future.

Several factors related to this demographic trend are placing pressure on the long-term care industry. Among them: an increasing emphasis on regulatory standards, a steady decline in profit margins, and increasing labor and supply costs. Additionally, long-term care facilities must deal with a growing exposure to litigation, attracting and retaining competent staff, and securing sensitive information assets.

While facing these challenges, most long-term care facilities are also pursuing quality of care and patient safety improvements. Residents and their families are demanding higher standards of care and are inclined to evaluate facilities based upon those expectations.

Momentum Healthcare products provide you with the tools and support you need to address these challenges with confidence. Our Electronic Health Records and Clinical modules enable you to realize efficiencies, achieve your care-giving standards, improve survey scores, and minimize litigation risk. Our Financial and Billing modules increase your control over costs and cash flow. When these products are united with our seamless integrations, automated processes, and superior reporting capability, you will be equipped to save time and money, and provide a higher quality of care.

“With the regulatory, financial and social challenges of providing long-term care today, it takes exceptional tools to do the job well. I really can’t imagine even trying to meet those challenges without Momentum.”

*Kate Kildahl, RN
Systems Support & Development Specialist
Augustana Care Services*

MOMENTUM
HEALTHWARE

Momentum Healthcare Solution for Long-Term Care

Whether you need a complete solution, or have software requirements for a specific area of your operations, Momentum is poised to serve your needs. Momentum is the leading provider of Microsoft-based software solutions for the long-term care market. We can equip your healthcare professionals with the tools to achieve outstanding clinical and financial results today, and the innovations to transform care delivery into the future.

Momentum Healthcare products have been developed and refined over a decade of serving long-term care customers. Our solution is comprised of four product categories. The solution enables reimbursement accuracy, cost savings, process efficiency, real-time communications, expert decision-making and a higher quality of care.

Momentum Healthcare is the only long-term care software supplier to exclusively embrace Microsoft technologies. As a Gold Certified Microsoft partner, Momentum Healthcare products utilize the powerful Microsoft operating platform, SQL Server database, .NET, Microsoft Dynamics GP (formerly Microsoft Great Plains) financial applications, and SharePoint portal technologies. Our products leverage the investments our clients have made in Microsoft desktop applications and operating systems.

Because Momentum Healthcare applications run on the versatile and stable Microsoft computing platform, you can choose the most effective network for your environment. You can use a facility-based model using a stand-alone or client/server based configuration, or operate in a hosted application environment to minimize technology infrastructure and administration costs.

Momentum products may be implemented as a complete and integrated solution or as modular components.

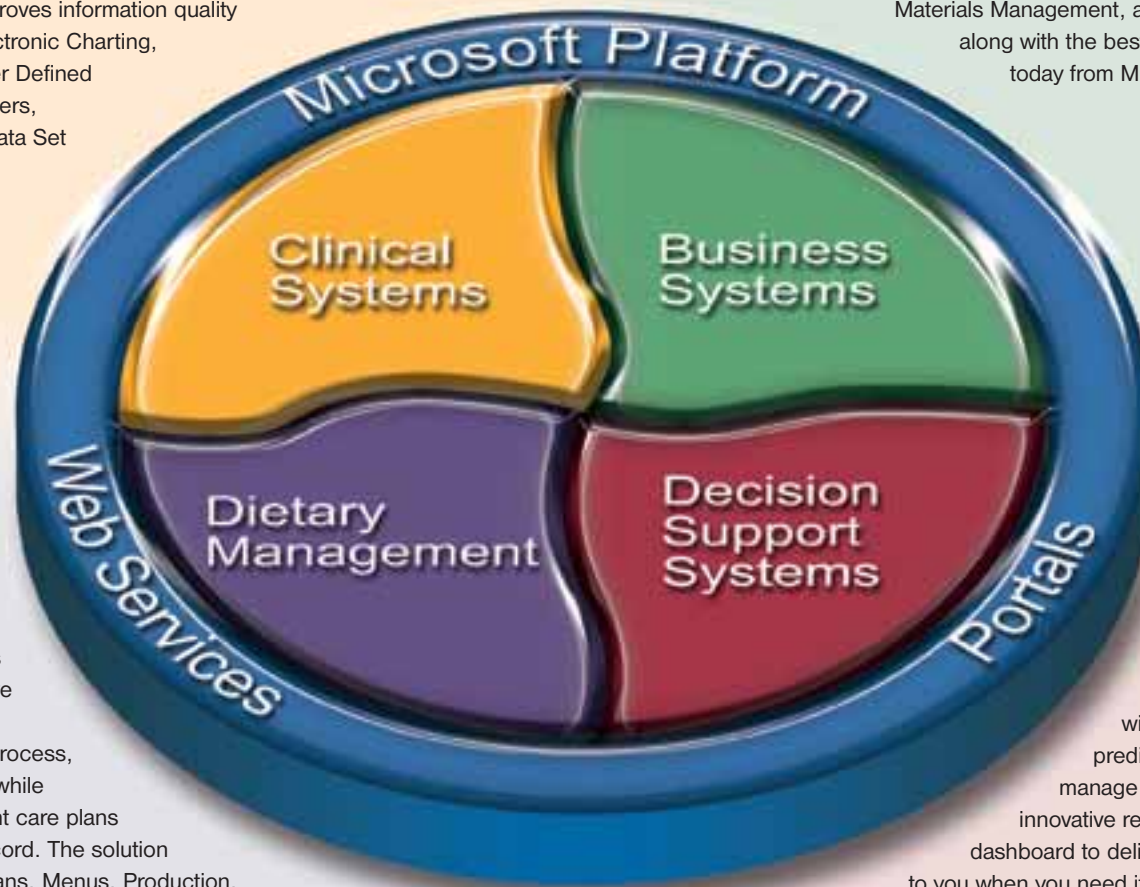

CLINICAL SYSTEMS

Clinical Systems includes a complete Electronic Health Record for resident-centric care. This powerful system streamlines the charting and assessment process, improves care planning, reduces administrative work, and improves information quality and access. It includes: Electronic Charting, Dynamic Care Planning, User Defined Assessments, Physician Orders, Progress Notes, Minimum Data Set (MDS), and Admissions.

BUSINESS SYSTEMS

Business Systems modules are optimized for maximum reimbursement, financial management, and administrative efficiency in long-term care.

We deliver this value with our powerful Billing Management, Materials Management, and Business Portal services, along with the best financial applications available today from Microsoft Dynamics GP.

DIETARY MANAGEMENT

Dietary Management is an innovative solution designed specifically for long-term care food services departments. It helps improve resident meal satisfaction, streamlines the production process, and reduces food costs, all while integrating directly to resident care plans and the electronic health record. The solution includes: Nutritional Care Plans, Menus, Production, Costing, and Assessment.

DECISION SUPPORT SYSTEMS

Decision Support Systems empower point-of-care and business professionals with the historical and predictive analytics to effectively manage operations. We provide an innovative reporting system and web dashboard to deliver valuable information to you when you need it.

Clinical Systems

“We love the focus charting. We were able to find exactly what we needed and are also impressed with the flow of information throughout the chart. Progress notes, focus, MDS, assessments, care plan, and care planning guide were all well integrated.”

*Laura Saleen, Director of Nursing,
Minnesota Veterans Homes*

A complete electronic health record for resident-centric care

This powerful system streamlines the charting and assessment process, incorporates dynamic care planning, reduces administrative work, and improves information quality.

Momentum’s clinical systems integrate seamlessly by sharing information with Billing Management, Dynamics GP financials, and Decision Support Systems.

Electronic Charting contains the breadth of resident information to complete a cohesive and record of care. Achieving a quality of care that meets regulatory guidelines and your high standards is a natural outcome.

Alerts will identify problems before they escalate and ensure that appropriate supervisors, managers and owners can quickly resolve an issue before it becomes a crisis.

Physician’s Orders will accommodate the entire order process from Physician entry to communication with Lab and Pharmacy, and automatically produces MAR and TAR to be used for electronic documentation as you perform medication pass and treatments.

Admission, Discharge, Transfer (ADT) includes general information such as demographics and resident history, as well as contacts, physicians, referrals, digital photos and advance directive instructions. This information can be communicated instantly to all areas of your enterprise – to your interdisciplinary team, your corporate offices and externally.

Momentum Healthware Clinical Systems

MDS 2.0 is an automated tool for completing, submitting and analyzing assessments, RUG III, RAPs, Outcome Scales and Quality Indicators. This module is based on federal and state-specific requirements to support an interdisciplinary team data collection effort. It is completely integrated with Care Planning and maintains ongoing documentation to increase speed and accuracy of assessment completion.

Care Planning allows for easily created Care Plans with full integration to MDS (RAPs) and Progress Notes. The module includes a library of standards-based Care Plans which can be quickly individualized. You can also add custom Care Plans. Momentum Healthware's Care Plan library has been developed based on the standards of the Joint Commission of Accreditation Healthcare Organizations, as well as numerous other research-based resources.

User Defined Assessments contains a full library of over 70 assessments such as Admission, Risk for Falls, Pressure Sore Status Tool, Care Needs, Skin Assessment, and more. The User Defined Assessment Builder allows you to create your own custom assessments with scoring capability, pick lists and check boxes, and designate required fields.

Progress Notes allows you to complete narrative charting online and integrate them with the Care Plan. This simple but flexible tool allows staff to categorize information in several ways, making it easy to search and retrieve narrative information.

Risk Management enables you to complete and analyze infection, incident, and medication error reports online. Instantly document and track critical incidences as they occur, and evaluate which units or facilities are effective at controlling incidences. "Alerts" can be sent via email to selected team members for all types of incidences, and you can track who sent them, who acknowledged follow-up, and the resulting outcomes.

MOMENTUM HEALTHWARE CLINICAL PORTALS

Whether it's enabling residents to communicate and stay close to family and friends, or streamlining the admission of new residents from hospital referrals, Momentum's clinical portal services can help long-term care facilities stay connected to the world. These innovative services harness the power of the Internet to strengthen personal and clinical relationships inside and outside the facility.

Completed MDS assessments flow into the billing system for expedited reimbursement.

BENEFITS

Maximize Reimbursement

Our libraries of assessments and our electronic MAR/TARs are comprehensive, yet simple to use. This makes it easy for staff to capture the full range of information on a resident, including ADL and behavior-related information, major drivers of reimbursement. MDS integration means data from the bedside record can auto-populate the MDS, where appropriate.

Surveys Made Easy

Daily bedside charting means that your documentation is always current, complete, accurate, and accessible via a quick printout for survey review.

Improved Staff Satisfaction

Your staff can rest assured that data needs to be entered once and will flow throughout the system and be accessible to other staff members. This improves interdisciplinary communication as key information is shared on a timely basis.

Decreased Litigation Costs

Comprehensive Order Entry "safety checks" cross-reference all new medication orders with the residents' allergy, diagnosis and current medication information to minimize errors. Seamless integration eliminates repetitive entry of information, decreasing dangerous and costly mistakes due to transcription errors.

Increased Referrals

Improving the quality of your communications with affiliated healthcare organizations and fostering communications between family members and residents will provide you with a competitive advantage. As a "facility of choice," referrals are sure to increase.

Business Systems

“The integration between the clinical and business system applications was very important to us. We expect a significant decrease in time and errors compared to a manual billing process.”

Business Systems are optimized for maximum reimbursement and administrative efficiency

MICROSOFT DYNAMICS GP FINANCIALS

In addition to the powerful Billing Management and Business Portal products, Momentum harnesses the award-winning Microsoft Dynamics GP product line, which is used by several hundred thousand organizations around the world, and has been optimized for long-term care by Momentum Healthware.

Microsoft Dynamics GP is a complete system to manage your organization's finances effectively, including General Ledger, Payables Management, Receivables Management, Bank Reconciliation, and Fixed Assets Management. Momentum leverages FRx Professional for creating long-term care financial reports that are customized to your chart of accounts. These insightful reports can be distributed automatically throughout your organization for review and analysis on a periodic basis.

MOMENTUM HEALTHWARE BILLING MANAGEMENT

Momentum's Billing Management provides you a complete solution to manage the complexities of billing, reimbursements, and collections for long-term care, CCRCs, and assisted living facilities. Real-time integration with the Momentum Healthware EHR ensures that all RUGs and billing events are available instantly to your business office. A flexible rules engine automates the process on a patient-specific basis, reducing billing errors and rejected claims.

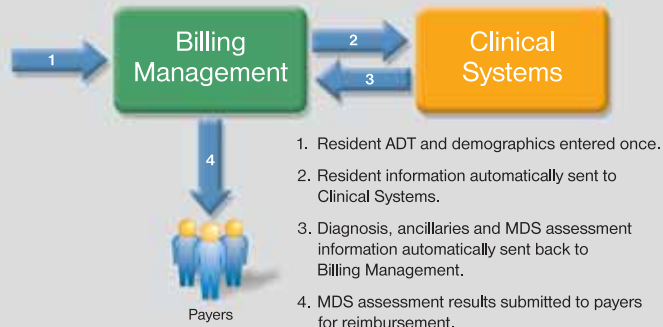

Resident Tracking is the central location for resident-specific information in the billing system. You can view resident rates, admissions information, and assessment results quickly and easily. Switch among multiple facilities, transfer residents among facilities, and suspend processes if a resident is discharged.

Momentum Healthware Business Systems

Cash Processing provides you with complete control over cash deposits, receipts, and aging. You can easily split receipts among multiple residents, and post across multiple facilities. Apply cash to a period, invoice, or detail level with a single click, and auto-apply cash based on either a LIFO or FIFO basis.

Billing Management and Clinical Systems Integration

Ancillary Entry enhances your control of ancillary items. Use batch processing to speed up entry, and assign recurring items to a resident account for automatic charging in each billing cycle. You can also make manual adjustments and post them against a resident account for easy corrections.

Billing takes easy-to-use Wizards to a new level. The Charge Wizard, Bill Wizard, and Month End Wizard simplify your billing processes. You can create charges across all facilities, automatically handle retroactive processes, and perform bill generation with invoice warehousing. The modules support an unlimited number of payers, and all popular billing forms.

MOMENTUM HEALTHWARE MATERIALS MANAGEMENT

Materials Management enables your organization to control costs and manage internal buying behavior. A browser interface allows you to quickly deploy the application across your organization with minimal cost.

MOMENTUM HEALTHWARE BUSINESS PORTALS

Business Portals foster collaboration between a long-term care organization, its suppliers, and survey teams by using proven web-based technologies, including Microsoft SharePoint Portal Server.

*Effectively manage
all your payers with
the Payer Contracts
Maintenance features.*

BENEFITS

Integration Between Billing and Clinical Applications

A central admissions process ensures there is no duplication of data. You can easily view roll-up reporting for multi-facility or single facilities. Automated MDS assessments and RUGs calculations will help you save time and increase billing accuracy.

Improve Cash Flow

With Billing Management, you can bill weekly or monthly to improve cash flow. Know your contractual commitments and expected revenue for any time period.

Accurate Aging Accounts Receivable Information

You can view aging and revenue information on-demand, in real time—no need to wait until month end to review your financial position. To ensure you are viewing “true” numbers, pre-bill and projected numbers are automatically excluded.

Stay Current with Regulations

The Billing module provides software intelligence, a rules engine, and integration to keep you current with regulations. The software does the work for you, automatically.

Streamline Accounting Processes

Flexible account and allocation definitions enable you to tailor account structures to your exact needs, while automatic transaction processing will increase speed and reduce errors.

Dietary Management

“We have less inventory on hand and fewer wasted meals—it saves us money each and every day.”

A complete, proven dietary system used to plan tens of millions of meals annually

Momentum’s Dietary Management System will assist your food service department by streamlining production, meal service and clerical work. Designed and supported by experienced dietitians, the system will improve resident care, meal satisfaction and survey results, while enabling you to reduce costs.

Nutritional Care Plans represent a powerful enhancement to resident nutritional management. You can generate easy-to-read tray cards, and create meal-specific dining area assignments, seating plan charts and reports. Your production staff can access resident preferences to ensure their special requests are not overlooked. You can generate nourishment lists and labels to simplify preparation, and track weights and scheduling assessments to accurately manage the nutritional risk per resident. The module is fully integrated with the clinical and billing ADT system to track resident admissions, discharges, and transfers.

Menus extend the value of Nutritional Care Plans with an integrated menu component to generate detailed serving reports for your staff. These reports ensure that residents receive the correct meal selections in accordance with therapeutic diet restrictions, dislikes and preference information. Automatic resident-specific tray tickets can significantly reduce tray errors. Selective or non-selective menus and tallies are the basis of your production reports in the fully integrated Dietary Management System.

Momentum Healthcare

Dietary Management

Production integrates resident and menu information to produce resident-driven production reports. You can produce easy-to-read recipes that are sized for your production needs, ultimately reducing waste and saving money. With the Production module you can scale recipes automatically to the precise amounts required per specific client selections, use existing recipes or create new ones, and schedule the production and delivery of recipes more effectively.

Costing will extend the capabilities of the Menus, Nutritional Care Plans and Production modules with real-time control of menu and recipe costs. The Costing module calculates extended costs and totals following a physical inventory, resulting in significant time savings. The Costing module provides the flexibility to cost recipes and menus in a variety of formats, cost each resident's meal choices, cost a cafeteria meal, and produce a suggested order list based on user-defined "grocery list" templates. You can also use the par stock feature to simplify the ordering process.

Assessment completes the Dietary Management System by providing you with quick access to nutritional analysis and assessment capabilities. Create goals and monitor the progress of each resident toward those goals. Ensure compliance with dietary guidelines and improve survey results.

The Platinum version of the Dietary Management System handles multi-facility chains and individual facilities. If you require centralized management, use the Platinum version to develop and control menus, recipes, inventory items and nutritional information at the corporate and regional offices. You can save time by efficiently distributing menus and recipes electronically to other facilities. Anticipate cost sensitive issues at the corporate level, while providing facilities with flexibility at the local level.

Create customized nutritional care plans for each of your residents.

BENEFITS

Save Time

Spend less time on labor-intensive processes such as handwriting tray cards and labels, and valuating inventory.

Fewer Errors

With built-in edit checks, there is no need to transcribe handwriting. The strong integration among modules also means continuity of information.

Better Survey Compliance

The system includes easy-to-generate log reports and includes HACCP-compliant standardized recipes.

Decrease Costs

Automated control of meals and recipes means less waste. You also have the ability to take advantage of seasonal price fluctuations.

Better Service to Residents

Develop personalized menus and seating plans, easily track personal preferences, and offer more menu options.

Decision Support Systems

Providing the insight to effectively manage your organization

Entering information into a system is one thing, however essential value is found in real-time information access. This empowers you to manage your business and make sound business decisions in a timely manner.

Based upon years of experience in long-term care, Momentum brings you powerful management visibility with our reporting and analytical views. Whether you are looking for simple reporting, sophisticated analysis, or graphical dashboards to monitor your key performance metrics, Momentum's decision support applications will put the information at your fingertips.

The Momentum Decision Support offerings harvest information from across your organizational systems, and present it for executive analysis. This blending of information allows for inter-departmental examination of strengths and weaknesses, root cause analysis of significant events and trends, and modeling of future changes and practices.

The Executive Information System tool (EIS) is particularly effective for multi-facility organizations that desire to examine, contrast and optimize care and business practices. For example, you can analyze your food cost per resident day, and then compare those metrics across each of your

facilities to determine which facilities are operating in the most cost-effective manner.

After identifying the major indicators that affect litigation exposure, surveys, reimbursement, billing, and care provision in your operations, Momentum can assist you with views to monitor them. When analyzing critical information, your managers can instantly drill down to the data elements that generated the views, or manipulate the data elements to create customized views of the information.

BENEFITS

Simplify report building with a spreadsheet look and feel. Anyone within your organization with appropriate security privileges can view standard reports and create customized views.

Improve information analysis with our tight integration to the family of Microsoft products to enhance your understanding of key information.

Reduce administrative work by automating report processing and distribution. Your employees will spend less time on administration and more time analyzing information and making informed decisions.

Enhance team communication by using our multiple report format distribution techniques to ensure the right information is delivered to the right people on a timely basis.

Visualize your key performance metrics with the customizable web-based Dashboard.

Decision Support Systems

Services and Support

OUR METHODOLOGY

Your satisfaction depends on the experience and range of services offered by your software partner. Momentum has delivered hundreds of successful software implementations and has a highly refined, best of breed methodology.

Discover Executive discovery determines corporate objectives and strategies that will be served by your solution. We assess the work flow, processes, technology architecture, software requirements and change management required to craft an effective implementation plan.

Design The solution design process will recommend specific technology, software, customization, reporting, services, and project management milestones to satisfy the requirements outlined in the Discover phase.

Develop This phase involves our project team developing your specific solution with all of the technologies, products and services comprised in the solution.

Deploy Our team implements the system and integrations during this phase. We provide training and testing to ensure your system is operational, reliable and productive.

Momentum Healthware – more than just software

When you make the decision to implement Momentum Healthware in your organization, you're not just getting software—you're tapping into years of industry-specific experience. Our consultants, trainers, and support specialists apply that experience to ensure you realize the maximum value from your investment in Momentum Healthware products.

TAILORED SERVICES

Each time we implement a solution for one of our customers, we strive to serve the unique operational attributes of their organization. Simply said, no two Momentum customers are the same. This understanding is why we tailor our services for you. Momentum has a rich array of offerings to ensure you derive the greatest value from your product investment.

GREAT SERVICE BEGINS WITH GREAT PEOPLE

You should take comfort in knowing that Momentum products are designed, sold, implemented and supported by professionals with direct experience in long-term care. Our industry experts include individuals trained as nurses, dietitians, accountants, and administrators. This enables our team to implement your solution with structured methodologies, automated tools, and industry best practices that have been tempered by years of experience. This proven process is designed to allow our consultants to apply their long-term care experience to enhance your operations.

TRAINING AND SUPPORT TO LEVERAGE YOUR INVESTMENT

Momentum has several training options that are designed to equip your staff to use the Momentum products effectively. Onsite training is provided by our consultants for the clinical, dietary, and billing products. Classroom training is often an effective and economical approach for our financial applications, as sites are available around the U.S. as part of our relationship with Microsoft. Momentum also provides online training options, videos, and a wealth of materials to complement our traditional training. When the need arises, Momentum is there to serve you with premier support. Our support specialists are prepared to assist you with product issues, operational questions, and technical problems.

EXPECT POSITIVE OUTCOMES FROM OUR SERVICES

Our services are designed to minimize disruptions during implementation, and ultimately save you time and money. Our structured methodologies and Quick Start tools will reduce your implementation time and garner buy-in among your staff during the process. Likewise, our flexible training offerings will allow you to choose cost-effective options that match the learning styles of your staff members, and our support team is prepared to deliver timely answers to your staff. All of these benefits equate to productivity and financial gains. And we know you expect this from a leader.

“Without a doubt, Momentum provides the best support of any software company I’ve ever worked with.”

Adam Prybyl, Royal Oaks Retirement Community

Customer Profile

“Implementing an electronic paperless health record has enabled our staff to increase time interacting with residents.”

Adam Prybyl, Royal Oaks IT Director

Paperless technology supports the mission and values of Royal Oaks Retirement Community

Royal Oaks, a Continuing Care Retirement Community in Sun City, Arizona, is committed to ensuring that all programs and services support their belief that retirement years can be the most fulfilling years of a resident's life. Momentum Healthware is helping Royal Oaks exceed their goals by providing comprehensive paperless systems that help improve care, increase time with residents, and reduce costs.

SITUATION

Located on a 39-acre campus, Royal Oaks supports independent living, assisted living and skilled nursing facility residents.

One of the facility's most valuable resources is its employees and their time. “Our goal is to increase our quality of care by saving time on administrative tasks and spending more time caring for residents,” says Adam Prybyl, Royal Oaks IT Director. “If a technology helps us, we use it. If it hurts us, we don't.”

“Going paperless” was a central focus in the implementation. Long-term healthcare generates an enormous amount of information which is difficult to manage on paper. The entire multi-disciplinary team needs access to information at the same time, which is impossible with paper records. Finally, legal requirements demand that all information be kept for six years, which creates enormous hurdles during audits and reviews.

SOLUTION

“We began by taking time to think about where we wanted to go and what the outcomes should be.” said Adam. “We knew there would be areas where our

“With Momentum we can quickly access all aspects of a resident’s record. It has streamlined the charting system, which allows for more time with residents. The electronic charting system removes the guesswork which comes with individual handwriting, and provides an accurate reading of what has been documented.” Joanne Creel, LPN

processes would need to adapt, and areas where we would need to modify the software.”

Momentum sent a qualified instructor - a veteran RN with healthcare administrative experience - to train Adam, also an RN, on the entire system; he then trained others. “This way, I knew the whole system, and could serve as an onsite resource,” said Adam.

Royal Oaks is using the entire Momentum Healthware Clinical Systems suite. They are also using the MDS module, even though it is not required because they are not currently Medicare certified. “We find it beneficial to maintain federal standards,” says Dina Capek, Director of Health Services. “If we choose to recertify, we will be ready.” It’s already helped with state surveys—Royal Oaks has had perfect state scores during the two years they’ve been using the system.

They use the full Microsoft Dynamics GP Financials suite as well, also implemented by Momentum. Integration is very strong with the Momentum products, and that will increase as Momentum products move to .NET.

BENEFITS

Paperless is the way to go

The inherent accessibility of information provided by the paperless capabilities of Momentum products helped Royal Oaks achieve a key goal—they spend more time with residents because information is more accessible, more accurate, easier to enter, and quicker to find.

Complete, accurate charting

Nurses now enter notes on wireless laptops at the point of

care, while the information is fresh. “The nurses record more information as a result,” says Dina, “which may be linked with residents receiving better care, not to mention the liability aspect—if there’s a question about care, we can show a more complete picture of what happened during the resident’s stay.”

Getting everything done

“Everyone has a standardized to-do list,” says Adam.

“Each nurse pulls a report every day before they leave. If they’ve forgotten anything, such as required medications, the report reminds them.”

More prepared for the future

Royal Oaks is confident in their decision to standardize on Microsoft technologies. “I have great confidence in the Microsoft platform,” says Adam, “so I’m very excited about the product path Momentum is working on to add a .NET component.”

WHAT’S NEXT?

Royal Oaks is a visionary organization, constantly looking for ways to use technology to improve healthcare. They now have a robust system that is meeting and exceeding their needs, but they’re not done yet. They plan to implement the upcoming Wound Management module when it’s released.

They also plan to implement the upcoming Decision Support System products. “Having access to key clinical and business metrics at all levels of the organization will be a huge benefit,” says Dina. “We’ll be able to monitor and manage to specific goals, and see results over time.”

Founded in 1994, Momentum Healthware is a prominent independent software developer specializing in the development, delivery, integration and support of seamless information systems for the healthcare industry. Its solutions serve the continuum of long-term care organizations in the United States and Canada. Its Microsoft-based solutions include: Electronic Health Record, Assessments, Registration, Clinical Portals, Dietary, Billing, Financials, Human Resources, and Decision Support Systems.

Momentum Healthware, Inc. has U.S. headquarters based in Nashville, TN and offices in Winnipeg, MB and Fargo, ND.
